

## INTEGRATED BUDGET INFORMATION SYSTEM (IBIS) Release 2.9.8b Notes – September 25, 2014

### ISSUES FIXED

- Corrected rounding issue with Revisions affecting Journal Entry Assignment
- Other miscellaneous small fixes were applied

### ENHANCEMENTS

- Auto refresh of browser when new build available – Beginning with deployment of version 2.9.9 (not version 2.9.8b) it will no longer be necessary for users to refresh their browser when new versions of IBIS are released. For this one time, however, you will need to do a refresh.
- New features were added to improve performance of the WS I Authorized/Certified form
- A change was made to display Inactive Cost Centers in the Organizational Structure
- Ability to export data from Budget Revision forms in any status (such as approved, read only, BRU draft, etc.) – This feature will save time when budget revisions need to be created with identical (or similar) information to previously processed form. You may export the data from one form, edit as necessary and import to a newly created budget revision.
- Added ability to create Capital Certifications after BRU is marked as ‘Sent to NCAS’
